

IVolt AI Labs Presents

Corporate ChatGPT Capable AI

Integrated Business Knowledge

- Custom Application Leveraging Current Chat-GPT Like Capabilities
- Integrate Corporate Data
 - SAN Drives
 - G-Drive/OneDrive/Drop Box...
 - Email
 - ETL Routing Services
 - Custom API Integration
 - Analytics
 - Logs
 - And Much More
- Access Corporate data In an easy to use, natural language, method allowing usage to extend from Sales, to Project Management, and Executive Analysis.

Benefits – Capabilities in Practice

- Analyze customer centric information with limiting knowledge sources to role-based authentication
- Leverage the vast data collections to create natural language insights, communication, Imagery and more
 - This will allow you to target the language and methodology that will “work” for the specific ask.
 - Example: Please Analyze Acme Corp and write a cover letter using language that has been warmly receptive in the past, ensure the targets are the basis of the analysis and identify gaps in the knowledge if we do not have enough information. You may also use the current public knowledge available to you as a secondary source.
- Understand what works, what doesn’t, employee patterns, culture and much more.
 - Create custom HR policies to optimize positive productivity changes.
- Analyze data in natural language so anyone can gain insight without complex data models.
 - Example : Please analyze the revenue from Acme Corp. and write a summary for the last 5 years indicating profit gaps that we can close to increase and expand our services with their business.
- Understand your target companies traditional moral and cultural compass, creating documents that Speak their language all while showcasing your products and services.
 - Perform this in a way that will speak to popular and successful methodologies currently being used while integrating the above cultural and ethical data to create the illusion of presenting to an audience of 1.

Security

Public Commercial Data Sources

- Access Language Models from a growing variety of sources we have compiled to create as narrow of a target as possible.
- Isolate the company data and product to your internal systems using our built in Firewall and packet blocking features.
- Updatable public language models will not affect your internal data and training will be a perpetual process, learning and growing as you learn and use the tool

Private Data Sources

- Your data will never leave the service server and is protected using in place awareness.
- Backup and Restore using built in tooling allowing you to retract previous additions
- Role based targeting allowing you to integrate financial and other sensitive data to specific roles or providing specific non-numeric only statistical data to provide the knowledge without the numbers approach.

Start with commercially licensed language learning models from IVolt's ever growing catalog.

Private Data Sources
